Executive Summary

My goal is to end global poverty while creating extraordinary profits for investors. I'm Zayne Lemuel, A black man from the small Caribbean island of Saint Lucia but currently living in Madrid, Spain. I not only climbed out of poverty but built a successful business, All Invest Global, in spite of extraordinary odds against me by listening to over 2,000 audiobooks and seminars during 14 years. With my unique perspective on life, I'm confident that with your help, we can end global poverty.

The Problem:

Poor countries are not self-sufficient and although billions can be donated to reduce the effects of poverty, it will never end it until we fix its root cause. The cause is mainly the lack of jobs, and not even the richest people in the world can afford to put the 700 million people who live in extreme poverty on their payroll. But here's a way we can completely end world poverty together. Although we can't create 700 million more jobs, we can surely create more people who create jobs by creating more millionaires in poor countries to stimulate economic growth. We need to create at least 0.05% more millionaires in poor countries to make their countries self-sufficient. A larger wealthy population in poor countries will create new jobs, provide better healthcare, build better infrastructure, invest in businesses, real estate, and other assets, stimulating economic growth. In first world countries, at least 0.05% of the population are millionaires, with Switzerland leading with 15.7% of their population. In contrast, in the richest third world countries, the millionaire population is as low as 0.000003%. Statistics say there are approximately 594 million entrepreneurs in the world in 2023, which is around 7.4%. But the US has an estimated 54 million entrepreneurs, representing about 32% of their adult workforce. However, the majority of entrepreneurs are in the richest countries, and those entrepreneurs in poor countries are mostly small farmers, street vendors, small store and bar owners. They are not those creating robots, developing AI, creating new software, apps and technology.

The Solution:

A new type of school to create entrepreneurs and millionaires where students will not just learn basic subjects, but learn high income skills and philosophy from the greatest minds in history as they develop actual businesses while in school. It's a risk-free investment as the schools will be built like office buildings for rental income to protect investors funds in case of low turnouts. We are starting with three schools in Nigeria, Uganda and Kenya. Each year, these students will create 300 to 600 new businesses, which the school will own 60% of each while the groups of 10 to 20 students would own 1.5% to 3% of each business and 10% would be owned by all the attending students that year. These businesses will create massive profits for investors as we would first start with only high income internet businesses. We have profit/success milestones that the first three schools have to reach before we expand to more schools. Our end goal is 1,000 schools, the creation of over 100,000 businesses and our philosophy adopted by governments and used in public schools in poor countries. With this plan, we will completely end global poverty in 100 - 300 years as we will create millions of millionaires who will create millions of jobs, and who will enrich their countries so much that their governments would be able to provide universal basic incomes to the unemployed and disabled

The New World:

In the new world we will build, with far more creative and financially independent people, who knows what else we could create together as a human race. Eradicating global poverty is just a tip of the iceberg of what this plan could accomplish. Just 20 years ago, ideas like artificial intelligence, limitless robots, digital currencies and reusable rockets seemed like science fiction. So imagine what we could create with just a 5% increase in the world's creative intelligent minds. All diligent history students know that just one man and one idea could drastically change the world. The most extraordinary businesses and empires in history all started with just ideas, philosophy, big goals, vision, all things we can give to students. I believe that with just a 5% increase in creative minds that we will not just end global poverty but also eradicate all diseases, significantly reduce crime globally, possibly even find a way to increase human lives by 100 years. Right now, those ideas seem like science fiction, but if someone from 100 years ago time traveled to now, he would find an unrecognizable world. So, join me in creating a new world of possibilities far beyond our imagination and touch the lives of billions of people, most not even born yet.

The Problem

Global poverty is a pressing issue affecting billions of people worldwide. Although many factors contribute to poverty including unemployment, underemployment, health care access, social inequality and political instability, one of the biggest factors is there are not enough jobs in poor countries. Although we can't create 700,000,000 more jobs, we can create more people who create jobs by creating more millionaires in poor countries to stimulate economic growth.

A larger wealthy population in poor countries will create new jobs, provide better healthcare, build better infrastructure, invest in businesses, real estate, and other assets. In first world countries, at least 0.05% of the population are millionaires, with Switzerland leading with 15.7% of their population. In contrast, in the richest third world countries, the millionaire population is as low as 0.000003%.

Percentage of Millionaires In 1st World vs 3rd World Countries	
Richest 1st World Countries	Richet 3rd World Countries
Switzerland - 15.7%	Uganda - 0.000003%
Hong Kong - 10.5%	Kenya - 0.00001%
Australia - 9.5%	Tanzania - 0.000003%
Netherlands - 8.7%	Morocco - 0.00002%
United States - 8.5%	Nigeria - 0.004%
Singapore - 7.9%	Mozambique - 0.003%
Sweden - 6.3%	Tunisia - 0.00005%
Canada - 6.3%	Ethiopia - 0.002%
Belgium - 6.0%	Angola - 0.007%
Norway - 5.9%	Algeria - 0.000006%

All the third world countries mentioned above are the **richest** African countries. So although Uganda's 0.000003% seems really low, some countries are so low that there isn't any data at all, suggesting their percentages might be 10 to 50+ times worse. It is very important for a country to have at least a 0.5% millionaire population because those are the people who create jobs, who build industries, infrastructure, who give to charities and who greatly develop their countries. When a country has 70%+ of its people living in poverty, those countries remain dependent on international assistance forever.

A 0.05% increase of millionaires will benefit countries by stimulating economic growth in several ways:

1. Millionaires often create jobs through entrepreneurship, philanthropy, and investments.
2. Millionaires may fund infrastructure, such as real estate, airports, hospitals, or transportation systems.
3. Millionaires often invest in startups and businesses, fostering innovation and entrepreneurship.
4. Millionaires contribute significantly to tax revenue, supporting public services and infrastructure.
6. Millionaires may fund research initiatives, driving technological advancements.
7. Millionaires often create international business connections, promoting trade and diplomacy.
8. Millionaires may attract top talent to the country, enhancing human capital.
9. Millionaires invest in educational institutions, improving quality and accessibility.

By leveraging the benefits of a larger millionaire population, countries can create prosperous societies and become self-sufficient like first world countries. But without a larger millionaire population, economic growth is very slow, which continues the deprivation of poverty generation after generation.

The Solution

The solution is to work on the root cause of poverty, and not just the effects. To do that, we need to drastically upgrade the education system in Black Countries. But there's no way their presidents will listen if we only have good ideas. We need a proven strategy which is to create specialized affordable business schools that create millions of millionaires. So although we can't create 700,000,000 more jobs, we can create more people who create jobs by creating more millionaires in poor countries to stimulate economic growth. Those millionaires will not just create millions of jobs and influence the presidents of those countries to upgrade their education system, they will also solve most of the causes of poverty including providing better healthcare, building better infrastructure and petitioning for social equality and political stability.

These schools will not teach basic subjects, they will teach the philosophy and skills required to create highly intelligent individuals likely to create high income businesses, new technology, and innovation. It's common knowledge that higher educational levels translate into greater earnings. However, to become a millionaire requires a completely different type of education. Is it possible that you can educate, motivate, inspire and teach a system to ordinary people for them to become extraordinary. By the end of the proposal, you will be convinced that it's not just possible, but has been done several times before.

I want to transform my knowledge and experiences into schools that don't just give good philosophy but give a strategic way to start new million-dollar businesses including learning the best philosophies, high income skills, marketing, creativity and everything required for success while they learn from the best business teachers in history. Best of all, students will be put in groups of 10-20 to create new businesses that will be continuously managed by our management company after graduation, providing life-long dividends.

The beauty of this plan is that it does not need to touch everyone directly or even 99.95% of a population, it just needs to touch 0.5%, and like in other countries, that small percentage will drastically change their countries. Trickle-down economics is the theory that by increasing the wealth of the rich, they will spend more money, which would trickle down throughout society, leading to more wealth for all. However, this plan takes it a big step further by enriching a larger population of countries, which will then trickle down throughout society.

You see, in countries like Uganda where 99.99999% of the population are not millionaires, there are few ways their citizens can help each other no matter how big their hearts are. If any solution to end global poverty does not include a plan to make people in poor countries self-sufficient, then it's an incomplete solution as they will always depend on help from other countries. But with your help, we can change this, we can create a better future for billions of people.

Without at least a 0.05% of millionaires in poor countries, those countries experience:

- Limited economic growth: Insufficient investment in entrepreneurship, innovation, and job creation.
- Dependence on foreign investment: Vulnerability to external economic fluctuations.
- Brain drain: Talented individuals may emigrate seeking better opportunities.
- Underdeveloped infrastructure: Inadequate funding for public services and infrastructure.

Case Study: Wealth Teachers

Several Wealth Teachers have created millions of millionaires. The most notable are:

Jim Rohn: Jim Rohn's life changed the day he heard a knock at his door, it was a girl scout selling cookies. She gave him the pitch and politely asked him to buy. Just one problem, he didn't have \$2, and he said he felt horrible, being 25 years old American, and he didn't have \$2. When she left, he said to himself,

“I don't want to live like this anymore,” and he started looking for an opportunity to change his life. Luckily, he met a rich man who he went to work for shortly after, who taught him all the disciplines, books and philosophy he needed to become successful. Five years later, he was a millionaire. For more than 40 years, Jim honed his craft like a skilled artist—helping people the world over sculpt life strategies that expanded their imagination of what is possible. It is no coincidence, then, that he is still widely regarded as one of the most influential thinkers of our time. He authored countless books, audio and video programs, helped motivate and shape an entire generation of personal-development trainers and hundreds of executives from America's top corporations. Jim

Rohn shared his message with more than 6,000 audiences and over 5 million people all over the world.

Napoleon Hill: When Napoleon Hill was a young reporter working for a magazine, the magazine decided that they were going to write articles on wealth. They sent Hill to spend three hours interviewing Andrew Carnegie, the wealthiest man in the world at the time and considered the first billionaire. Unbeknownst to Napoleon Hill, Carnegie was looking for someone to study the rules of success to create a philosophy that anyone could use because he thought it was an absolute crime that people like himself were going to their grave with all this knowledge. Hill took on this challenge and spent the next 20 years interviewing over 500 of the richest people in the world and wrote several books including “Think and Grow Rich” which is among the best-selling self-help books of all time, selling over 80 million books. A business teacher named Bob Proctor said, “So far as I've been able to determine, Carnegie made maybe 50 millionaires, but Napoleon Hill made millions of millionaires.” The main idea of the book is a lesson repeated after every story/lesson, which is “Whatever the mind can conceive and believe, it can achieve.” Hill said when you pray, don't ask for money but say “O Divine Providence, I ask not for more riches but more wisdom with which to make wiser use of the riches you gave me at birth, consisting in the power to control and direct my own mind to whatever ends I might desire.”

Dan Peña is the founder of Quantum Leap Advantage (QLA), the revolutionary method for super success with over 29 years of proven track record that has produced over a trillion dollars' worth of equity/value with his mentees and devotees since 1993. Thus making him known as The Trillion Dollar Man. Peña with his mentees and devotees have created an unprecedented level of super success, producing from 7 figures to 11 figures of wealth creation in various industries around the world. Peña's principle instrument of success is his 7 step QLA Methodology that he personally used to create \$450 Million. Together with laser beam focus, Peña has mentored and coached countless to achieve their dreams.

He was also retained as a consultant to bring QLA methodology to one of the top 25 businesses in the world, where Peña mentored for 10 years Dr. Klaus Kleinfeld who became President/CEO of Siemens; Former Chairman/CEO of Alcoa; Former Chairman/CEO of Arconic. Dr. Kleinfeld is also former CEO of NEOM, the biggest deal on the planet worth \$500 billion USD building the next megacity of the future.

Proposal Part 1: The Schools

The first three schools will be built in Lagos in Nigeria, Kampala in Uganda and in Nairobi in Kenya. They will each be eight story glass buildings, built in city centers, with each floor level being 9,600 sqft. The first investors would get the best deal: 40% ownership of the first three schools along with 10% ownership of All Invest Global and their investment also being a loan paid yearly. Future investors will get a much smaller percentage for new schools and no ownership of All Invest Global.

Investment Required For Three Schools: \$25,658,021 USD

I Am Investing \$3,000,000 USD Of My Own Funds.

The Investment will purchase the land, build the schools and purchase all equipment, computers, furniture, stationary and also pay for staff and expenses in the first year.

- Investment is 100% fully secured as the building will be designed for office rentals.
- The initial plans are for the creation in Nigeria, Uganda and Kenya, but we can start in any country.

Milestone One: The First Three Schools

This is how the schools would work: While we are teaching them all the philosophy and skills they need to become successful, we would also be guiding them to start businesses we choose in groups of 10 to 20 which:

- 60% ownership of each business would be owned by the school.
- 30% would be collectively owned by the 10 to 20 students.
- 10% would be owned by all the attending students that year.

This will give them not just knowledge but experience turning ideas into high income businesses, which will inspire them to create more businesses after graduation.

Although each school will be able to accommodate 2,000 students. We calculated our projections for both (1,000 students - 50% capacity) and (2,000 students - 100% capacity) in case of low turnout. In that case, the remaining space in the building will be rented to external businesses.

After we build 1,000 schools and all investors are paid off, we would be able to make the schools tuition-free, or at least just a tiny amount to make the school self-sufficient. Alternatively, we could maintain that fee and donate to charities. But for now, we have to charge a small fee to pay off investors. It would be a flat fee of \$160 USD per month, in comparison, Harvard University Tuition - \$57,261 to \$226,200 USD.

Our School Price: \$160 USD/Month	Academic Term: 1 Year	Course Duration: 1 Year
-----------------------------------	-----------------------	-------------------------

<p>1st Year: With 50% Capacity - 3,000 Students</p> <p>Tuition: \$160 USD/Monthly or \$1,920 USD For Entire Year Number of Students Per Year: 1,000 Student Per School (3,000 students) Profit From Tuition Fees: $\\$1,920 \times 3,000 = \\$5,760,000$ USD Yearly</p> <p>Projected Yearly Revenue: \$5,760,000 USD Projected Yearly Expenses: \$500,000 USD Projected Yearly Profit: \$5,260,000 USD</p> <p>Investor Repayment from 1st Year: \$4,760,000 USD</p>	<p>1st Year: With 100% Capacity - 6,000 Students</p> <p>Tuition: \$160 USD/Monthly or \$1,920 USD For Entire Year Number of Students Per Year: 2,000 Student Per School (6,000 students) Profit From Tuition Fees: $\\$1,920 \times 6,000 = \\$11,520,000$ USD Yearly</p> <p>Projected Yearly Revenue: \$11,520,000 USD Projected Yearly Expenses: \$1,000,000 USD Projected Yearly Profit: \$10,520,000 USD</p> <p>Investor Repayment from 1st Year: \$9,520,000</p>
--	--

<p>The remaining \$500,000 USD will be used for expenses for the 2nd year.</p> <p>Future Years:</p> <p>We predict every year after, the profit will grow at least \$600,000 USD from new student businesses as every year, at least 3,000 new students will be taught, and 300 new businesses will be launched. This additional profit will go directly to repaying the investors.</p> <p>1st Year: Investment Repayment: \$4,760,000 USD 2nd Year: Investment Repayment: \$5,360,000 USD 3rd Year: Investment Repayment: \$5,960,000 USD 4th Year: Investment Repayment: \$6,560,000 USD 5th Year: Investment Repayment: \$7,160,000 USD</p> <p>With 50% Capacity: Our projections suggest that investors will be paid off in full by the 5th year.</p>	<p>USD</p> <p>The remaining \$1,000,000 USD will be used for expenses for the 2nd year.</p> <p>Future Years:</p> <p>We predict every year after, the profit will grow at least \$1,200,000 USD from new student businesses as every year, 6,000 new students will be taught, and 600 new businesses will be launched. This additional profit will go directly to repaying the investors.</p> <p>1st Year: Investment Repayment: \$9,520,000 USD 2nd Year: Investment Repayment: \$10,720,000 USD 3rd Year: Investment Repayment: \$11,920,000 USD</p> <p>With 100% Capacity: Our projections suggest that investors will be paid off in full by the 3rd year.</p>
--	---

Milestone Two: \$600,000 USD Collective Profit Created By Students.

Once we reach this milestone, we can now show new investors that we have a proven strategy and will seek funding for the next ten schools.

Milestone Three: The Next Ten Schools

Each new school will be in a new country in the poorest countries in the world. They will all be built like office buildings to protect inventors' funds.

Milestone Four: 100 Schools

After each of those new ten schools also create \$1,000,000 USD collective profit by student businesses, and have at least 500 students each (\$6,480,000 USD in profit) we can now move ahead with the next 95 schools.

Milestone Four: 1,000 Schools

Once each of the 100 schools create at least \$10,000,000 collective profit with student businesses and \$162,000,000 USD profit from tuition fees, we will approach investors to open 1,000 schools in the poorest cities around the world.

The End Goal: Our Philosophy in Public Schools In Poor Countries

During the process of constructing 1,000 schools, we will also approach every government leader in each poor country to adapt our philosophy in public schools. We could create free primary and secondary schools around the world, mixing the teachings of basic educational fundamentals with our philosophy. We will start in areas with a lack of basic education for children ages 5 to 18 years old.

Investment Cost Breakdown

We did extensive research on how much it would cost to build in Nigeria, Kenya and Uganda to find the prices from the largest construction companies, along with prices of ideal land lots in the center of their largest cities.

Planning Stage:

Architect, Structural Engineer, Civil, Mechanical, Electrical and Plumbing Engineer, Interior Designer
= \$40,000 USD

Building Cost:

\$80 USD Per Square Foot

8 Story Building
Each Floor Level - 9,600 sqft
9,600 x 8 = 76,800 sq.ft.

76,800 sq.ft x US\$80 = \$6,144,000 USD

Other Construction Cost:

Fit-Out = \$250,000 USD
High-End Finishes = \$200,000 USD
Two Elevators = \$200,000 USD

Total Other Construction Cost: \$650,000 USD

Total Cost For One Building: \$6,794,000 USD

We identified three ideal land lots in the city centers with these prices:

Land In Kampala, Uganda: \$936,021 USD

Land In Nairobi, Kenya : \$800,000 USD

Land In Lagos, Nigeria: \$2,000,000 USD

Breakdown:

Planning Stage: \$40,000 USD

Cost For Three Buildings: \$20,382,000 USD

Cost For Three Land Lots: \$3,736,021 USD

Furniture, Salaries For 1st Year, Advertisement Costs, and Miscellaneous Fees: \$1,500,000 USD

Total Cost: \$25,658,021 USD

I Am Investing \$3,000,000 USD Of My Own Funds.

Projections

Investors In the 1st Three Schools Will Receive:

40% Ownership of first Three Schools.

10% Ownership of All Invest Global.

5% Ownership of All Future Schools.

Also:

Schools would own 60% of all businesses that students build.

Investors Repayment:

With **100%** Student Capacity : **Investors will be paid off by the 3rd year.**

With **50%** Student Capacity: **Investors will be paid off by the 5th year.**

(See Page 8 For Breakdown)

In 20 Years, Our Projections Suggest:

40% Ownership of First Three Schools.

Those schools would by then own 60% of 1,200 to 1,500 businesses

Projected Value of 40%: \$40 Million to \$100 Million

10% Ownership of All Invest Global.

Projected Value of 10%: \$10 Million to \$20 Million

5% Ownership of All Future Schools.

It's difficult to predict how many schools we'll have in 10 years.

And how many businesses they'll own by then, If we only have 50:

Projected Value of 5%: \$50 Million to \$100 Million

In 30 Years, our projections suggest:

40% Ownership of First Three Schools.

Those schools would own 60% of 2,000 to 2,500 businesses

Projected Value of 40%: \$400 Million to \$500 Million

10% Ownership of All Invest Global.

Projected Value of 10%: \$50 Million to \$100 Million

5% Ownership of All Future Schools.

It's difficult to predict how many schools we'll have in 20 years.

And how many businesses they'll own by then, If we only have 200:

Projected Value of 5%: \$500 Million to \$800 Million

100,000 New Businesses

Because 60% of all businesses will be owned by the schools, their profits would be used to keep building new schools. It's hard to predict how many businesses we will create with students, or how many schools we will be able to build at this early stage. However, here are some rough projections using the lowest possible numbers as scenarios:

Scenario #1:

Within the next five years, we hope to have at least 200 schools out of the 1,000 school goal. But let's imagine, we only had 50:

50 schools, having an average of 2,000 students each year, with each school creating 200 new businesses each year. That would be 10,000 companies being created each year.

If we don't count businesses created in the first years, that would be at least 50,000 businesses created after 10 years and after 20 years, 100,000 businesses.

Let's imagine 80% of those businesses were unprofitable and had to be closed. If the 20% that were profitable made an average of \$100,000 profit per year. $20,000 \times \$100,000$ would be \$2 billion USD profit made every year after.

Scenario #2:

Let's imagine that our idea was so revolutionary that within 10 years, billionaires, governments, corporations, venture capital and investment companies along with millions of small investors funded all 1,000 schools to completely end global poverty:

1,000 schools, having an average of 2,000 students each year, with each school creating 200 new businesses each year. That would be 200,000 companies being created each year.

If we don't count businesses created in the first 10 years, that would be at least 2,000,000 businesses created after 10 years and after 20 years, 4,000,000 businesses.

Let's imagine 80% of those businesses were unprofitable and had to be closed. If the 20% that were profitable made an average of \$100,000 profit per year. $400,000 \times \$100,000$ would be \$40 billion USD profit made every year after.

Summary

Even at the most conservative projections, it would be an extraordinary success for both shareholders and students. As mentioned on page 7, 10% of business in each school year would be owned by all the attending students that year. Therefore, even if a group of 10 students created a business that failed, they would still benefit from any profitable business made by all students in their year. Those dividends would not only spread wealth but also encourage them to start their own businesses.

As mentioned on the prior page, the first investors will get a deal that future investors would only dream of, which is 5% ownership of all future schools and 10% ownership in All Invest Global, which would surely return billions in returns in the future.

Proposal Part 2: Risk-Free Investment

Although the primary focus is to end global poverty, we realize that the only way to attract investors is by making it profitable for them. To protect investors' funds, especially during the start where low student turnout is anticipated, we are going to create the buildings in glass for office space rentals. The floors of the building will remain all open so that we can see the demand for offices before school begins.

The biggest factor in how much rent an office can charge is the type of business that rents the offices. Banks, government departments and international companies fetch a much higher rent than average businesses. My first job was working for the owner of a huge commercial building which had a government office, which paid 80,000 USD just for one office space. Our research on the property markets in Nigeria, Uganda and Kenya suggest that the three buildings could create between \$100,000 USD and \$300,000 USD per month from tenants.

Here's a breakdown of how those figures will pay off investors:

Projection For Rentals of: \$300,000 USD Per Month / Per Building

One Building: \$300,000 USD Per Month.
Three Buildings: \$900,000 Per Month.
Yearly: \$10,800,000 USD.
2 Years and 4 Months To Create \$25,658,021 USD
With Expenses: **Approximately 2 Years To Repay Investors**

Projection For Rentals of: \$200,000 USD Per Month / Per Building

One Building: \$200,000 USD Per Month.
Three Buildings: \$600,000 USD Per Month.
Yearly: \$7,200,000 USD.
3 Years and 6 Months To Create \$25,658,021 USD
With Expenses: **Approximately 4 Years To Repay Investors**

Projection For Rentals of: \$100,000 USD Per Month / Per Building

One Building: \$100,000 USD Per Month.
Three Buildings: \$300,000 USD Per Month.
Yearly: \$3,600,000 USD.
7 Years and 1 Months To Create \$25,658,021 USD
With Expenses: **Approximately 8 Years To Repay Investors**

The Curriculum

These are some of the ideas that students will learn. Of Course, this is not everything, but just a teaser. Students will learn not just business philosophy, theories and principles, but also practical skills and methods to create a successful business.

Philosophies From:	Books	Ideas:
Earl Nightingale	Think and Grow Rich	Learning from experts
Napoleon Hill	Awaken the Giant Within	The Power of Big Goals

Businesses Students Will Start

The first businesses will be websites, phone apps, software and virtual businesses as those types of businesses that can scale internationally the fastest with the least expenses. After the first 10 schools, we would diversify into other types of businesses.

The schools would own 60% of all businesses and thus continue their management after graduations.

Buildings Design

We are going to build the buildings in steel and glass in a very modern way to protect investors funds in case of low turnouts expected during the start. The remaining office spaces will be rented out to businesses and organizations.

We will work with architects to construct blueprints for the building's final designs, which we will send to investors for approval before starting.

Case Study: Similar Schools & Businesses

The Rebel School - Since 2011, The Rebel School has helped over 20,000 people to transform their lives, teaching them how to start and run online businesses. Most of the team have run their own business, made their own mistakes, and learned what to do and what not to do in real business.

The School For Startups - Their programs are designed to remove the barriers between you and your dream of starting a business. As stated on their website: "We believe that anyone can be an entrepreneur, and we have proven it time and time again."

Coursera is now one of the largest online learning platforms in the world, with 129 million registered learners. Coursera partners with more than 300 leading universities and businesses to bring flexible, affordable, job-relevant online learning to individuals and organizations worldwide. They offer a range of learning opportunities—from hands-on projects and courses to job-ready certificates and degree programs.

Shopify: As of 2023, Shopify hosts over 7 million stores globally, with 4.36 million active ones. This vast array of stores presents a diverse picture of business sizes and types, making average revenue figures both insightful and complex. Recent data suggests the average Shopify store generates about \$67,000 USD in annual revenue. To break this down into a monthly figure, simple arithmetic is applied: \$67,000 divided by 12 months equals approximately \$5,583 per month. This figure, however, only scratches the surface.

Udemy is a popular e-learning site with 73M+ Learners, 75K+Instructors, 250K+ Courses, 1B+ Course enrollments, 75 Languages, 16K+ Enterprise customers. Its courses can include videos, articles, extra resources, and a certificate of completion. Udemy's revenue reached \$599.22 million in 2022. With their global catalog spanning the latest skills and topics, people and organizations everywhere are able to adapt to change and thrive.

BigCommerce: (Nasdaq: BIGC) is used by tens of thousands of Merchants and has 1000+ full-time employees. BigCommerce is a leading open SaaS and composable ecommerce platform that empowers brands and retailers of all sizes to build, innovate and grow their businesses online. They provide their customers sophisticated enterprise-grade functionality, customization and performance with simplicity and ease-of-use.

Woocommerce: WooCommerce is committed to democratizing commerce and putting you in control of your own livelihood. Their core platform is free and open source, empowering anyone to sell anything, anywhere. At present, there are 4,707,863 live stores running on the WooCommerce platform. Launched on September 27, 2011, the plugin quickly became popular for its simplicity to install and customize and for the market position of the base product as freeware (even though many of its optional extensions are paid and proprietary).

PinnacleCart: With over 45,000 clients, PinnacleCart is one of the most powerful eCommerce solutions on the market today. PinnacleCart was developed by a pair of childhood friends, Craig and Mike. At different times in their life, they had both tried their hand with online business ideas. Unfortunately, they both found the eCommerce software they tested to be lacking major features that are necessary for success. Ideas for online businesses would always sneak back into their conversations and the guys finally came to the same conclusion – that they needed to build a better eCommerce solution.

Shift4Shop: 21+ years | 22k+ Merchants | 100 Team members - Shift4Shop is a feature-rich ecommerce platform serving businesses of all sizes in a wide range of industries. They provide everything you need to build a secure ecommerce website and start selling products or services online. Their turnkey ecommerce experience includes an intuitive website builder, product and order management, customer marketing tools, and more. Choose from dozens of professionally designed, industry-specific templates, all of which are mobile-friendly, SEO optimized, and highly customizable. Their platform encompasses hundreds of best-in-class features including social media marketing, SEO, and an expansive marketplace ecosystem of third-party developers, experts and affiliates.

Case Study: Most Profitable Universities

Although the primary focus is to end global poverty, we realize that the only way to attract investors to help us is by making it profitable for them. The global higher education market size was USD 739.12 billion in 2023, calculated at USD 828.85 billion in 2024 and is expected to reach around USD 2,324.45 billion by 2033, expanding at a CAGR of 12.14% from 2024 to 2033. These are the wealthiest universities in the USD, ranked according to each school's financial endowment:

UNIVERSITY OF TEXAS SYSTEM	\$69,210,000,000

Why Me

I've had the pleasure of meeting hundreds of people from all age groups, races and net worths in my life. But I've studied the lives of far more people than I've met and observed a wide range of philosophies. While watching documentaries of the most influential people in history, some have inspired me, others have saddened me, but the ones that were most memorable were those who changed the world with their extraordinary love for people. Love and empathy are not qualities you can buy or learn, I think it's something that's given to us by our parents and life experiences.

I know everyone says this, but I have two of the best parents in the world. They are two of the most loving people you could ever meet in life. I could tell you a million stories of examples of their selfless love for strangers. And that love echoes in me. I think of the entire world as family. The suffering of others troubles me, so much so that I wouldn't be able to be a doctor or any job that would require me to see people suffering, because I would also suffer, as silly as that might sound, and this personality trait can completely change the world. I used to think I was strange until I watched the documentaries of the lives of Mother Teresa, Martin Luther King, Nelson Mandela, Mahatma Gandhi and Harriet Tubman.

Mother Teresa's life was one of the most curious, they said one day she was walking down a street and saw a woman being eaten alive by rats. The woman was so sick and weak that she couldn't even move to chase them away. When Mother Teresa saw this, she picked up the woman off the ground and brought her to the hospital. The nurses said there was no way they could take care of the woman, but she insisted until they did. And after they finally agreed, she went out to the street to look for more people. Someone asked her "Why?" she replied, "I was not there when Jesus was suffering, so I could not help him, but these people are Jesus in other bodies, and I can help them"

My Experience Teaching

"Socrates taught Plato. Plato taught Aristotle. Aristotle taught Alexander the Great."

Knowledge is one thing but converting it to ideas and philosophy that can change people's lives is very different. Experts say you need 10,000 hours to master a skill. Here's how I've mastered the art of teaching. My country of Saint Lucia has a very different and unique education system, since it only has about 200,000 people. When students reach grade 5, all students in the country sit an exam before they enter high school called Common Entrance. Based on our grades from highest to lowest, students are placed in schools for the most intelligent to the least intelligent. The two most intelligent schools are an all-boys, and all-girls school. And because my grades were one of the highest, I attended high school with the smartest boys in the country.

The five years I attended were especially lucky as we had the most unique principal named Mr. Rowan Seon. Every morning, he gathered the entire school in an assembly hall and gave us talks on goals, business, legacy, philosophy and everything dealing with how to live an extraordinary life. After we left school, we created a WhatsApp Group with the 90 students from my year, which we are still in today, and I became the self-proclaimed principal giving 2 to 3 short talks each every week. Most talks or seminars as I like to call them, are informative, speaking on subjects such as AI, quantum physics, goals, law of attraction, discipline, fear, courage, leadership, God, universal laws, influence, health, book summaries and everything else dealing with how to live an extraordinary life.

During those 17 years, I've slowly mastered my craft of delivering ideas in a unique, creative, understandable and inspiring way.

About Me

"If I have seen further, it is by standing on the shoulders of Giants". - Isaac Newton

My name is Zayne Lemuel, I'm a black man from the Caribbean Island of Saint Lucia, but currently live in Madrid, Spain. I not only climbed out of poverty but built a successful business, All Invest Global, in spite of extraordinary odds against me by listening to over 2,000 audiobooks and seminars during 14 years. The first 12 years of my life, my father made an above average income of over \$5,000 USD per month, which was a lot of money in those days, at least in my little country. But one day he lost his job and our family struggled for over 10 years to make ends meet.

As a little boy, I remember going to the rich part of my country and seeing 16-year-olds driving luxury cars and wondering what makes the difference between those with extraordinarily wealth and those with nothing. I watched my parents struggle a lot as they suffered through poverty and promised myself when I was just a child that one day I would make them rich.

But like most children, it was a forgotten idea and I eventually got accustomed to living in poverty. The only thing that constantly reminded me was when my father and I had to drive to a public standpipe in another city to collect water in buckets because we lived in a city which did not have running water in our pipes most of the time. However, when I got a little older, like a normal 16-year-old, I tried to not think about it believing that I couldn't change it, and spent my nights at parties and with friends and girls.

The Day My Life Turned Around

When I was 20 years old is when those ambitions resurfaced with a burning desire more than ever before. At that time, I was going through the most painful breakup of my life with my ex-girlfriend of three years, but the best was yet to come. It was seemingly a normal day, I woke up early for a job I had been working for three weeks. My job was Rental Manager of three commercial buildings, of which I had to get new tenants. When I started three weeks earlier, I suggested to my boss that we would need a business website to display all the offices we had available, which he agreed to. I did not know how to make a website then but I used my advanced computer skills to try to figure it out with tutorials. There were no free website builders in those days, but only a very bulky software called Microsoft FrontPage where the process was very long and tedious.

That life changing day, as soon as I walked into the building, my boss called me into his office abruptly and asked "So, where's the website?" So I went to take my laptop, start it up as quickly as possible and try to open the bulky website software as quickly as I could. And while the boss and his secretary kept waiting, my laptop kept freezing, and my nervousness grew as I kept clicking it several times to open it faster. The boss angrily shouted, "You haven't been doing anything in three weeks?!" He turned to his secretary and said "Give him a check for his time then send him home." Within a few seconds of him saying that, the software finally opened, and the website was finally visible. He apologized and sent me to my desk to continue working. I continued the day shaken up with a feeling of inferiority. The afternoon, I went home and told my mother, "I would never work as an employee for anyone ever again." And I never did. With my anger from the breakup and the boss, and inspiration from a documentary about Law of Attraction that spoke about setting big goals for your life, I decided then that I was going to be a millionaire.

Learning Entrepreneurship

I used my new-found knowledge to start a website design business and did websites for small businesses, but the pay was very low, and the customer acquisition process was very slow. I got lucky when I pitched a website to an elected politician. He not only said yes, but after I was completed, he introduced me to not only another elected politician, but also to the Prime Minister of my country. This really changed my world view of what I thought was possible for myself. Can you believe, a 20-year-old working for the leader of his country. I felt like I could really become someone important, wealthy and influential.

But even if the pay was more money than I had ever made in my life, I still hated working for them because they took many weeks after completion to issue payment. I was chasing them constantly before they finally paid and during that time, it created all those same feelings of inferiority I got while working for my first boss, so I wanted to do something differently.

I then became a real estate agent, thinking I could leave those problems behind me by just selling a few big houses and creating massive profits. But the problems persisted, as it was very difficult to find home buyers. People seeking rental properties were much more prevalent, and I rented a few properties, but even that was problematic as I would rent a property one month and then many months went by before I could rent another. So I decided to use my website design skills to create a business that could make me a millionaire to finally end those types of business problems. I wanted a business that would be able to bring high amounts of value to the marketplace, not just in my country, but globally. It took me years to figure out the kind of business that would be able to do this. I tried a global website design company, then a yacht sales website, then a jewelry website, but all failed.

At 25 years old, I started All Invest Global. It took many more years of development to get it into the version it is now, but with it, I was finally able to offer an extraordinary amount of value. All Invest Global now offers over \$1 Trillion USD worth of value to the marketplace with some of the most expensive items in the world, one being a cruise ship for \$1 billion. We offer several properties over \$100 million, with over 60,000 luxury properties in all.

But creating All Invest Global was the hardest thing I've ever had to do in my life. I would have probably quit a long time ago without the help of the 2,000 audiobooks and seminars I listened to. In my third year of business, I got lucky to stumble upon a seminar on YouTube that would forever change my life. It was given by a man named Jim Rohn, and one of the things he said was "Did you know that thousands of successful people wrote their stories in books, and they wrote how they did it, and people don't read it? How would you explain that? Just one book could save you five years." Those words opened my eyes to a new world.

I give a lot of credit to Jim Rohn for all the unique ideas he gave me. One of the most important was to have big goals. My friends can't imagine doing the kind of business I do, far less than 10 years ago when I started. I doubt very few 25-year-olds in the world could believe in themselves so much to think they could sell million dollar items around the world. It's all inspired by Jim Rohn, who gave such powerful speeches. Once he said "Don't ask for security, ask for adventure. Better to live 30 years full of adventure than a 100 years safe in the corner."

Jim said "there are two ways of learning, one is through our experiences and the other is through other people's experiences. And it's much better to learn from other people's experience because imagine someone had a problem for 20 years, then wrote a book about it, then you come along one day and read this book, now you have 20 years experience in this problem" I thought "Wow!" What a unique way to think. So I drowned myself in every book on success I could find, listening to books while I work every day. In my free time, I traded fictional movies for documentaries and biographies of the great inventors, scientists, kings and queens, empires and the most influential people who ever lived. One thing that's clear when you look through history is that one person can change the world.

I know I'm built very differently because my friends went to the same school as me, had the same teachers, went through the same heartbreaks, had the same kinds of problems with their bosses, however, they don't believe they could change the world. They don't even have big goals, or great plans for what they want to do with their lives and in the lives of their children and parents, far less for goals of what they want to do for our country and the world.

But I know there's something very different about me because there's a burning desire in me to want to not just make billions but also change the entire world. I think of the suffering of other people, and want to help, even if I never met them, never shared a drink with them or laughed and cried with them. I feel deep within my soul that everyone is my family. And I can make the world a better place for billions of people. Together, we can completely end global poverty. Lily Tomlin said "I always wondered why somebody doesn't do something about that. Then I realized I was somebody."

About My Business

Website: www.allinvestglobal.com

God

“With man this is impossible, but with God all things are possible.” - Jesus (Matthew 19:26)

I don't think a proposal to end world poverty would be complete without talking a little about God. Maybe because my father is a preacher, so I grew up going to church 2 to 3 times every week. I believe that God wants us to help each other. There are people who say that if there was a God, he wouldn't let all these tragedies happen. But I think he gives us power to fix the world on our own. He said we were made in his image, so we have a little of God's power in us to create a better world, and he gives us clues on how to do it like:

1. Love:

At 1 Peter 4:8, it says "Above all, love each other deeply, because love covers over a multitude of sins." But I find that a lot of people today don't have much love for others, some not even for their own parents. As I mentioned earlier, my friends and I have a WhatsApp group together, we are all about the same age 34 to 35 years old, an age where you'd think they would be extremely serious about life.

My island of St. Lucia is a third world country, and of course has all the problems of other third world countries that people in the first world countries couldn't imagine, but it doesn't trouble my friends like it does me. And while their parents continue to work in their 60s, while they drive past thousands of poor people, ghettos, beggars, while they see large amounts of murders, robberies, and violent acts in the news every day, it doesn't affect them. Instead, they are more concerned with sports, parties, concerts, celebrities and having a good time.

So I think it's true when Jesus said "Blessed are the pure in heart, for they shall see God." Because very few people have genuine love for other people, and only think about their own interests. I think just 5% of people are like Mother Teresa, Martin Luther King and Gandhi who genuinely care about strangers. I suffered and struggled so much in those 17 years of business trying to build a better life for my parents, but most people wouldn't do that. 1 John 4:16 says "God is love; and he that dwelleth in love dwelleth in God, and God in him."

2. Faith To Overcoming Extraordinary Obstacles:

Most people look at a big problem, and just think "that's impossible to solve" and walk away. But if you study any person who has ever achieved massive success, you'll see those people always had massive belief in either themselves or in God. In the Bible, it says the entire Israelite army was terrified of Goliath because he was not only a huge giant, but also a warrior who was known for his great strength and skill in battle. And here comes this little teenager, David, with no experience in war at all. The entire Israelite army looked at this giant and thought, "He's so big, we can't kill him." But here comes this teenager with a sling and a stone who thought, "He's so big, I can't miss." That's the power of belief. Belief in yourself, belief in God, belief in things that you cannot see at the moment.

Imagine if scientists never believed there were cures, medications, or vaccines that could be created to heal, help or prevent diseases. Then they would never even try to find them. But scientists think, "Well, I don't know the right combination of things to create this medication right now, but if I keep trying a bunch of different combinations until I find one, surely I will find one" If they didn't have that belief, they wouldn't even try. Jim Rohn said "When the final book about you is written, let it show your wins, let it show your losses, but never let it show you didn't try."

I think challenging problems become easier if you have a strong belief in God or yourself. When I find it difficult to believe in myself, I just put my belief in God. At 1 Samuel 17:45, it says, "David said to Goliath, 'You come against me with sword and spear and javelin, but I come against you in the name of the Lord Almighty.'" So I'm confident that even if I'm from a small country that I can be the one to end global poverty. When they told the Kings about Jesus from Nazareth, they said "Nazareth! Can anything good come from there?" But Jesus was from Nazareth. He said "If you have faith as small as a mustard seed, you can say to this mountain, 'Move from here to there,' and it will move. Nothing will be impossible for you." - Matthew 17:20

3. Don't Doubt Your Abilities:

Another curious story in the bible is when God was talking to Moses. Having the most powerful entity talk to you directly, you would think just that would be enough for him to be the most confident person in the world. But Moses still doubted, and the story says this angered God. It's a very long story, so I'm going to paraphrase for it for you:

God: "I have seen how my people are suffering as slaves in Egypt, I am sending you to Pharaoh to bring my people the Israelites out of Egypt."

Moses: "Who am I that I should go to Pharaoh and bring the Israelites out of Egypt?"

God: "I will be with you."

Moses: "What if they do not believe me or listen to me and say, "The Lord did not appear to you?"

So God gave him some miracles to perform so they would believe.

Moses: "Pardon your servant, Lord. I have never been a good speaker, neither in the past nor since you have spoken to your servant. I am slow at speaking."

God: "Who gave human beings their mouths? Who makes them deaf or mute? Who gives them sight or makes them blind? Is it not I, the Lord? Now go; I will help you speak and will teach you what to say. Then the Lord's anger burned against Moses and he said, "Your brother Aaron, I know he can speak well. He is already on his way to meet you"

I think it's an interesting story especially for this proposal. I've had this idea to end global poverty for six years already, but like Moses, I've been continuously doubting my abilities to do it. I used to think, how can someone from a poor place in a poor country really end global poverty? But Jesus was from Nazareth.

4. What God Think About Knowledge:

Although there are many times in the bible that God simply tells you directly how we should live, a lot of times, he uses stories and metaphors to drive the point home. There are many places in the bible where he tells us that we should try to be as wise as possible. One of my favorites is when he spoke to King Solomon and said "Solomon, ask for anything you want, and I will give it to you."

Solomon, modestly requests "An understanding mind to govern your people, able to discern between good and evil" It says God was very pleased that Solomon had asked for this. So God said to him, "Since you have asked for this and not for long life or wealth for yourself, nor have asked for the death of your enemies but for discernment in administering justice, I will do what you have asked. I will give you a wise and discerning heart, so that there will never have been anyone like you, nor will there ever be. Moreover, I will give you what you have not asked for--both riches and honor--so that in your lifetime you will have no equal among kings.

Jim Rohn said "Don't wish it was easier, wish you were better. Don't wish for less problems, wish for more skills. Don't wish for less challenge, wish for more wisdom." 2,000 audiobooks and seminars later, I can attest to the fact that you can do the most amazing things with knowledge and I'm sure you can too.

My point is, a strong belief in God can help you in many ways. Although some argue about his existence. I think you can use the knowledge of the bible to create a unique life and think things that unbelievers wouldn't be able to think. The universe has mathematical laws and intelligence that governs everything and scientists say if just one of those laws were as much as 0.00001% different, we wouldn't be able to exist, so all evidence leads to it being creatively made this way. "Finally, brothers and sisters, whatever is true, whatever is noble, whatever is right, whatever is pure, whatever is lovely, whatever is admirable—if anything is excellent or praiseworthy—think about such things." Philippians 4:8

Conclusion - The New World

Although it won't happen overnight, increasing the population of wealthy people in poor countries will drastically benefit the lives of millions overtime. If we could just create 500 millionaires in each poor country, even if 300 do nothing at all, but 200 build homes, infrastructure, schools, create jobs, provide better access to water, Internet, health care. Just those 200 would already massively impact their country and eventually, in time, this plan will touch the lives of millions of people. Remember just one person can completely change the world, so imagine what 100, 1,000 and 10,000 people can do. By enriching poor people, we create a massive opportunity for them to enrich others.

Poverty affects everyone indirectly because of the progress we could have made as a human race without it. Ants, wolves, lions, bees, giraffes and several other animals work together, but right now there are five active wars happening around the world and thousands of wars throughout human history and countless wars on the streets between individuals. Meanwhile, experts say that we wouldn't be able to protect ourselves if the same size comet that killed the dinosaurs were to hit the earth today. Meaning, the entire human species with all our history and intelligence could be wiped out while we fight among each other.

Like in the movie Armageddon, it could be that only when the possibility of outside forces threaten to destroy us, that we might know a few moments of peace and unity among all countries, races and classes. But as the most intelligent life form, I suggest we do not wait until a circumstance like that to come together as brothers and sisters.

If over 99% of inventions, innovations and new technology come from people who are well fed, well sheltered, well clothed and well educated, shouldn't we then ensure everyone meet's at least those basic standards so that we multiply the level of creativity in our world. If just a few people could invent the internet, the computer, the television, radio, cryptocurrencies and artificial intelligence, could you imagine what 700,000,000 more creative minds could do?

What if there are cures to terrible diseases, ideas for space travel, longevity, vaccines all trapped inside the head of someone who can't express them because right now he needs to focus on finding clean water. It's hard to imagine, but if just one man with a dream could create a more efficient rocket than NASA, imagine what ideas the 700,000,000 people who live in extreme poverty might have, that could die with them.

I understand it might be hard for some people to look at a black child dying from hunger and think that child could be the next Einstein, Tesla or Newton. But I think Shakespeare said it best when he said "Hath not a Jew eyes? Hath not a Jew hands, organs, dimensions, senses, affections, passions; fed with the same food, hurt with the same weapons, subject to the same diseases, healed by the same means, warmed and cooled by the same winter and summer as a Christian is? If you prick us do we not bleed? If you tickle us do we not laugh? If you poison us, do we not die?"

Les Brown said "The graveyard is the richest place on earth, because it is here that you will find all the hopes and dreams that were never fulfilled, the books that were never written, the songs that were never sung, the inventions that were never shared, the cures that were never discovered, all because someone was too afraid to take that first step, keep with the problem, or determined to carry out their dream."

But I'll take those words a little bit further by saying sometimes people don't even have the opportunities to take the first step. Sometimes people are so poor that they go to the graveyard with the greatest inventions that could have changed mankind. Someone said "You don't know what you don't know" and we really don't know how much of a better place the world could be and could have been if we ended global poverty years ago. Maybe by now, all diseases would have been cured, maybe we would have buildings on Mars, maybe we would have found a way to live 100 years more. But all those ideas died with someone who was too busy looking for clean water for his/her family. So global poverty still affects everyone even if you live in the most luxurious places like Monaco or Dubai.

But we can forever change this now. I'm very confident that together we can change the world. I'm confident that with my knowledge and experience, we can touch the lives of billions of people. I'm confident in the ability of words to drastically change someone's life, because several times words have changed mine. One

of those moments that words changed my life and caused me to dream big, seek more, aim higher, reach for better, was when I was just 16 years old.

On that day, I came home from school and watched a black man give an acceptance speech for winning the 2008 presidential elections in the US. It was very inspiring for me because as a young black man who didn't see many black role models on television that I could aspire to become, it was the first time I believed that I could really achieve anything I put my mind to. So that speech had a big impact on me, still till this day, it sometimes echoes in my mind because it was truly an unforgettable moment for me. I'll never forget that moment when I walked into the house and everybody's eyes were already glued to the television, and I stood in the back just listening to him. And as he talked my heart began to beat faster, tears began running down my face because he said:

"This election had many firsts and many stories that will be told for generations. But one that's on my mind tonight is about a woman who cast her ballot in Atlanta. She's a lot like the millions of others who stood in line to make their voice heard in this election, except for one thing: Ann Nixon Cooper is 106 years old.

She was born just a generation past slavery; a time when there were no cars on the road or planes in the sky; when someone like her couldn't vote for two reasons — because she was a woman and because of the color of her skin. And tonight, I think about all that she's seen throughout her century in America — the heartache and the hope; the struggle and the progress; the times we were told that we can't and the people who pressed on with that American creed: Yes, we can.

At a time when women's voices were silenced and their hopes dismissed, she lived to see them stand up and speak out and reach for the ballot. Yes, we can.

When there was despair in the Dust Bowl and depression across the land, she saw a nation conquer fear itself with a New Deal, new jobs and a new sense of common purpose. Yes, we can.

When the bombs fell on our harbor and tyranny threatened the world, she was there to witness a generation rise to greatness and a democracy was saved. Yes, we can.

She was there for the buses in Montgomery, the hoses in Birmingham, a bridge in Selma and a preacher from Atlanta who told a people that "We Shall Overcome." Yes, we can.

A man touched down on the moon, a wall came down in Berlin, a world was connected by our own science and imagination. And this year, in this election, she touched her finger to a screen and cast her vote, because after 106 years in America, through the best of times and the darkest of hours, she knows how America can change. Yes, we can.

America, we have come so far. We have seen so much. But there is so much more to do. So tonight, let us ask ourselves: If our children should live to see the next century; if my daughters should be so lucky to live as long as Ann Nixon Cooper, what change will they see? What progress will we have made?

This is our chance to answer that call. This is our moment. This is our time — to put our people back to work and open doors of opportunity for our kids; to restore prosperity and promote the cause of peace; to reclaim the American Dream and reaffirm that fundamental truth that out of many, we are one; that while we breathe, we hope, and where we are met with cynicism, and doubt, and those who tell us that we can't, we will respond with that timeless creed that sums up the spirit of a people: Yes, we can." - President Barack Obama
